

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently Amended):

A computerized method, comprising:

receiving one or more files at a storage location from a first device being controlled by a user, device, across a first network of a first type; and one or more networks, one or more files to a storage location, each of the one or more files having a first format;
~~transferring a selected file onto a different media based on input from the first device, the selected file having a second format differing from the first format; and~~
providing a file transfer notification to a second device, across a second network of a second type different from the first type, when the one or more files is received at the storage location. the one or more networks.

2. (Currently Amended):

The method of claim 1, further comprising:

generating a media transfer ~~request.~~ request at the storage location;

3. (Currently Amended):

The method of claim 2, further comprising:

providing ~~media-a media~~ transfer notification to the second device, across the second network, when the media transfer request is completed. one or more networks.

4. (Original):

The method of claim 1, wherein the first device is the same as the second device.

5. (Original):

The method of claim 1, further comprising, a server receiving input from the first device to select one or more files in archive.

6. (Previously Presented):

The method of claim 1, wherein the first format being a tiff format and the second format being a JPEG format.

7. (Original):

The method of claim 6, wherein, the server provides media transfer notification to the first device.

8. (Previously Presented):

The method of claim 1, wherein the first format being a MP3 format and the second format being a DVD format.

9. (Previously Presented):

The method of claim 1, further comprising, tracking a mailing status of the media transferred files.

10. (Currently Amended):

The method of claim 1, wherein the first device is Internet enabled and the second device is non-Internet enabled.

11. (Cancelled)

12. (Currently Amended):

The method of ~~claim 1, claim 10~~, wherein the first device selected from the group consisting of an ATM, a photo kiosk, a personal computer, a ~~pager, telephone~~, and an Internet-enabled PDA.

13. (Currently Amended):

The method of ~~claim 1, claim 10~~, wherein the second device is telephony enabled.

14. (Currently Amended):

The method of ~~claim 1, claim 13~~, wherein the second device is selected from the group consisting of pager, telephone, fax, answering machine and telephony-enabled PDA differing from the first device being a computer.

15. (Cancelled)

16. (Original):

The method of claim 1, wherein the received files are graphic files.

17. (Original):

The method of claim 1, wherein the received files are audio files.

18. (Currently Amended):

The method of claim 1 wherein ~~one of the one or more networks~~ the second network is the PSTN.

19. (Currently Amended):

The method of claim 1, wherein one of the ~~one or more networks~~ first network is selected from the group consisting of the Internet, WAN, and LAN.

20. (Currently Amended):

The method of claim 19, wherein VPN is ~~implemented~~ implemented on the first network.

21. (Currently Amended):

A computerized system, comprising:

a server, comprising:

a file manager, and

a storage medium, wherein the server connects a first device to an account through a first network of a first type ~~one or more networks~~ for file transfer and media transfer requests, ~~and generating media transfer notification identifying completion on an event involving a transfer of a file from a first format to a second format and provides a file transfer notification to a second device through a second network of a second type different from the first type, the file transfer notification identifying completion of a transfer of the file in the first format to the server.~~

22. (Cancelled)

23. (Currently Amended):

The system of claim 21, ~~claim 22~~, wherein the second device is selected from the group consisting of a pager, a telephone, a fax, an answering machine and a telephony-enabled PDA differing from the first device being a computer.

24. (Currently Amended):

The system of claim 21, ~~claim 22~~, wherein the first device is Internet enabled and the second device is non-Internet-enabled.

25. (Cancelled)

26. (Currently Amended):

The system of claim 21, ~~claim 22~~, wherein the second network ~~one of the one or more networks~~ is PSTN.

27. (Currently Amended):

The system of claim 21, ~~claim 22~~, wherein the first network ~~one of the one or more networks~~ is a LAN.

28. (Currently Amended):

The system of claim 21, ~~claim 22~~, wherein the first network ~~one of the one or more networks~~ is a WAN.

29. (Currently Amended):

The system of claim 21, wherein ~~claim 22~~, ~~where~~ the second device is telephony-enabled.

30. (Currently Amended):

The system of claim 21, ~~claim 22~~, where the second device is the same as the first device.

31. (Currently Amended):

An apparatus, comprising:

~~one or more networks;~~

a first connection to a first network of a first type;

a second connection to a second network of a second type different from the first type;

~~means for interacting with a server;~~

~~means for receiving media transfer notification, one or more files at the first connection;~~
and

~~means for receiving file transfer notification.~~ providing a file transfer notification at the second connection when the one or more files is received.

32. (Original):

The apparatus of claim 31, further comprising:

means for transferring files; and

means for storing files.

33. (Original):

The apparatus of claim 31, further comprising:

means for obtaining the files in a transferred media.

34. (Original):

The apparatus of claim 33, further comprising:

means for tracking a mailing status of the transferred media.

35. (Currently Amended):

A machine-readable medium having executable instructions for performing a method, the method comprising:

~~transferring one or more files across one or more networks;~~

~~transferring at least one of the one or more files into a different media;~~

~~providing file transfer notification; and~~

~~providing media transfer notification.~~

receiving one or more files at a storage location from a first device, across a first network of a first type; and

providing a file transfer notification to a second device, across a second network of a second type different from the first type, when the one or more files is received at the storage location.

36. (Currently Amended):

The machine-readable medium of claim 35 having further executable instructions for performing a method, the method further comprising:

transferring the one or more files ~~from the archive~~ to a different media.

37. (Currently Amended):

The machine-readable medium of claim 35 having further executable instructions for performing a method, wherein the ~~media~~ file transfer notification confirms a successful file transfer into an archive.

38-40. (Cancelled).

41. (Currently Amended):

A system, comprising:

a processor;

a memory coupled to the processor through a bus; and

a file archive and media transfer process executed from the memory by the processor to cause the processor to receive one or more files at a storage location from a first device, across a first network of a first type, and ~~one or more networks, one or more files to a storage location~~, to provide file transfer notification to a second ~~device~~ device, across a second network of a second type different from the first type, once the one or more files have been uploaded to the ~~system~~ system, to transfer a selected file having a first format ~~of the one or more files into the selected file having a second format differing from the first format before transfer to one of the first and second devices.~~

42. (Original):

The system of claim 41, wherein the file transfer notification of an event selected from the group consisting of successful file transfer, partially successful file transfer, and unsuccessful file transfer.

43. (Original):

The system of claim 41, further comprising:

one or more files converted to a different media and the different media delivered to an address.

44. (Original):

The system of claim 43, wherein a media transfer notification is sent to the second device to provide tracking information on a shipment of the files transferred to the different media.

45. (Previously Presented):

The system of claim 41, wherein the first device is a computer and the second device is a cellular telephone.

46. (Previously Presented):

The system of claim 41, wherein the second device is selected from the group consisting of pager, telephone, fax, answering machine and telephony-enabled PDA differing from the first device being a computer.
